

# STRATEGY DINNER

## Seamless global strategy for NCE development and API supply chain by optimizing technology, providing collective expertise, and reducing the delivery time and cost – an unmet need

The “heart of drug development” is to employ innovative technologies and collaborations across the globe, to assemble a powerful Drug Development Engine to accelerate candidates from drug discovery, PRD, scale-up through commercialization. The best way to increase the valuation of drug discovery and development pipeline and company’s portfolio is to accelerate their milestones, reduce costs while maintaining quality. Today’s CDMO industry is lacking a unique collective expertise in one place, utilizing ground-breaking technologies for the synthesis of architecturally complex molecules that can intercept any molecule, at any stage of development. Ultimately the know-how of phase appropriate execution, ‘shaving’ months off the development cycle time and a “one stop shop” of delivery of entire CMC management is an unmet need.
